

NDS8435 Single P-Channel Enhancement Mode Field Effect Transistor

General Description

SO-8 P-Channel enhancement mode power field effect transistors are produced using Fairchild's proprietary, high cell density, DMOS technology. This very high density process is especially tailored to minimize on-state resistance and provide superior switching performance. These devices are particularly suited for low voltage applications such as notebook computer power management and other battery powered circuits where fast switching, low in-line power loss, and resistance to transients are needed.

Features

- -7A, -30V. $R_{DS(ON)} = 0.028\Omega @ V_{GS} = -10V$
 $R_{DS(ON)} = 0.045\Omega @ V_{GS} = -4.5V$.
- High density cell design for extremely low $R_{DS(ON)}$.
- High power and current handling capability in a widely used surface mount package.

Absolute Maximum Ratings $T_A = 25^\circ\text{C}$ unless otherwise noted

Notes:

- R_{θJA} is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins. R_{θJC} is guaranteed by design while R_{θCA} is determined by the user's board design.

$$P_D(t) = \frac{T_J T_A}{R_{\theta J A}(t)} = \frac{T_J T_A}{R_{\theta J C} + R_{\theta C A}(t)} = I_D^2(t) \times R_{DS(on)} @ T_J$$

Typical R_{θJA} using the board layouts shown below on 4.5"x5" FR-4 PCB in a still air environment:

- 50°C/W when mounted on a 1 in² pad of 2oz copper.
- 105°C/W when mounted on a 0.04 in² pad of 2oz copper.
- 125°C/W when mounted on a 0.006 in² pad of 2oz copper.

SO-8 Tape and Reel Data and Package Dimensions

SOIC(8lds) Packaging Configuration: Figure 1.0

Packaging Description:

SOIC-8 parts are shipped in tape. The carrier tape is made from a dissipative (carbon filled) polycarbonate resin. The cover tape is a multilayer film (Heat Activated Adhesive in nature) primarily composed of polyester film, adhesive layer, sealant, and anti-static sprayed agent. These reeled parts in standard option are shipped with 2,500 units per 13" or 330cm diameter reel. The reels are dark blue in color and is made of polystyrene plastic (anti-static coated). Other option comes in 500 units per 7" or 177cm diameter reel. This and some other options are further described in the Packaging Information table.

These full reels are individually barcode labeled and placed inside a standard intermediate box (illustrated in figure 1.0) made of recyclable corrugated brown paper. One box contains two reels maximum. And these boxes are placed inside a barcode labeled shipping box which comes in different sizes depending on the number of parts shipped.
