

### • FEATURES

- ◆ 9 GHz to 14 GHz Frequency Band
- ◆ 2.2 dB Noise Figure
- ◆ 25.5 dB Gain
- ◆ 19 dBm Output Power at Saturation
- ◆ +6 V Single Bias Supply

### • DESCRIPTION AND APPLICATIONS

The Filtronic Solid State LMA246 is a high gain low noise PHEMT amplifier that operates from 9 to 14GHz. Reactively matched 3-stage amplifier provides 28dB nominal gain with 2dB typical noise figure and 1-dB gain compression power output of +17dBm that can be used as a pre-driver amplifier for phased array radar as well as commercial communications applications. Ground is provided to the circuitry through vias to the backside metallization.

Notes:

- Operating conditions that exceed the Absolute Maximum Ratings could result in permanent damage to the device.
- Recommended Continuous Operating Limits should be observed for reliable device operation.
- Power Dissipation defined as:  $P_{\text{TOT}} \equiv (P_{\text{DC}} + P_{\text{IN}}) - P_{\text{OUT}}$ , where  
 $P_{\text{DC}}$ : DC Bias Power  
 $P_{\text{IN}}$ : RF Input Power  
 $P_{\text{OUT}}$ : RF Output Power
- This GaAs MMIC is susceptible to damage from Electrostatic Discharge. Proper precautions should be used when handling these devices.

• ASSEMBLY DRAWING

Notes:

- Recommended lead bond technique is thermocompression wedge bonding with 0.001" (25µm) diameter wire. The bond tool force shall be 35-38 gram. Bonding stage temperature shall be 230-240°C, heated tool (150-160°C) is recommended. Ultrasonic bonding is not recommended.
- The recommended die attach is an eutectic 80/20 Gold/Tin solder, using a stage temperature of 285-290°C. Maximum time at temperature is 1 minute. Use of forming gas (90% N<sub>2</sub>, 10% H<sub>2</sub>) for best results.
- Bond on bond or stitch bond acceptable.
- Conductor over conductor acceptable. Conductors must not short.

- MECHANICAL OUTLINE

Notes:

- All units are in microns ( $\mu\text{m}$ ).
- All bond pads are  $100 \times 100 \mu\text{m}^2$ .
- Bias pad ( $V_{DD}$ ) size is  $100 \times 121.5 \mu\text{m}^2$ .
- Unless otherwise specified.

- HANDLING PRECAUTIONS

To avoid damage to the devices care should be exercised during handling. Proper Electrostatic Discharge (ESD) precautions should be observed at all stages of storage, handling, assembly, and testing. These devices should be treated as Class 1A (0-500 V). Further information on ESD control measures can be found in MIL-STD-1686 and MIL-HDBK-263.
