High-Speed, Low r_{ON}, SPDT Analog Switch
(2:1 Multiplexer)

FEATURES

- Operates From Single 2 ~ 5.5 V
- SC70-6 Package
- 5-Ω Switch Connection Between Ports
- Minimal Propagation Delay
- TTL Compatible Input Level
- RoHS Compliant

Pb-free

Product Is Completely Pb-free

APPLICATIONS

- Cellular Phones
- PDAs
- GPS
- MP3
- Data Acquisition

DESCRIPTION

The DG2307 is a single-pole-double-throw switch/2:1 mux designed for 2- to 5.5-V applications. Using Vishay Siliconix proprietary sub-micro CMOS process, the DG2307 achieves low on-resistance, low power consumption. It is 1.6-V TTL logic compatible across the operation voltage range. With its low r_{ON} and low parasitic capacitance character, it is ideal for clock signal and high speed data stream switching. It has low insertion lost and negligible propagation delay.

The DG2307 can handle both analog and digital signals and permits signals to be transmitted in either direction. When Bn pin is at off status, the path will have a high impedance with respect to the output. Break before make is guaranteed.

As a committed partner to the community and the environment, Vishay Siliconix manufactures this product with the lead (Pb)-free device terminations. For analog switching products manufactured with 100% matte tin device terminations, the lead (Pb)-free "—E3" suffix is being used as a designator.

Device Marking: G1

TRUTH TABLE	
Logic Input (S)	**Function**
0	B_0 Connected to A
1	B_1 Connected to A

ORDERING INFORMATION		
Temp Range	**Package**	**Part Number**
-40 to 85°C	SC70-6	DG2307DL-T1—E3

ABSOLUTE MAXIMUM RATINGS

Reference to GND
V+ ..... -0.3 to +6 V
S, A, B[a] ..... -0.3 to (V+ + 0.3 V)
Continuous Current (Any terminal) ..... ±50 mA
Peak Current ..... ±200 mA
(Pulsed at 1 ms, 10% duty cycle)
Storage Temperature (D Suffix) ..... -65 to 150°C

Power Dissipation (Packages)[b]
6-Pin SC70[c] ..... 250 mW

Notes:
a. Signals on A, or B or S exceeding V+ will be clamped by internal diodes. Limit forward diode current to maximum current ratings.
b. All leads welded or soldered to PC Board.
c. Derate 3.1 mW/°C above 70°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

SPECIFICATIONS

Parameter	Symbol	Test Conditions Otherwise Unless Specified V+ = 3.0 V, V_S = 0.25 V to 0.7 V+[e]		Temp[a]	Limits −40 to 85°C Min[b]	Typ[c]	Max[b]	Unit

Notes:

a. Room = 25°C, Full = as determined by the operating suffix.
b. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
c. Typical values are for design aid only, not guaranteed nor subject to production testing.
d. Guarantee by design, nor subjected to production test.
e. V_{IN} = input voltage to perform proper function.
f. Guaranteed by design and not production tested. The bus switch propagation delay is a function of the RC time constant contributed by the on-resistance and the specified load capacitance with an ideal voltage source (zero output impedance) driving the switch.

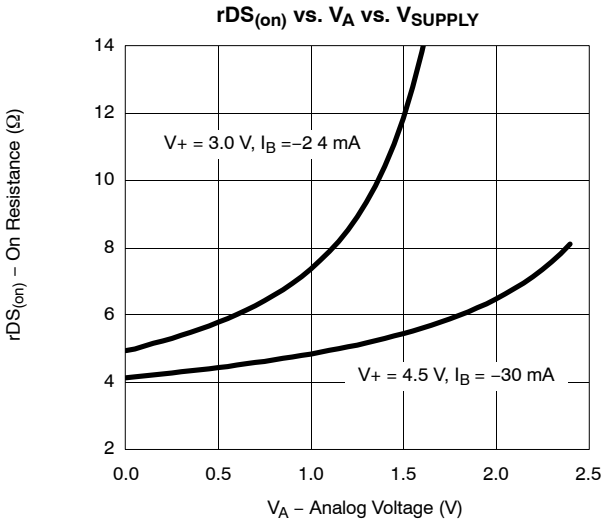
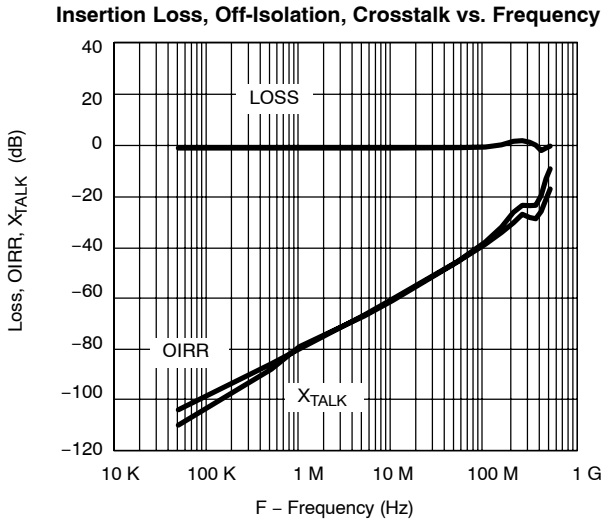
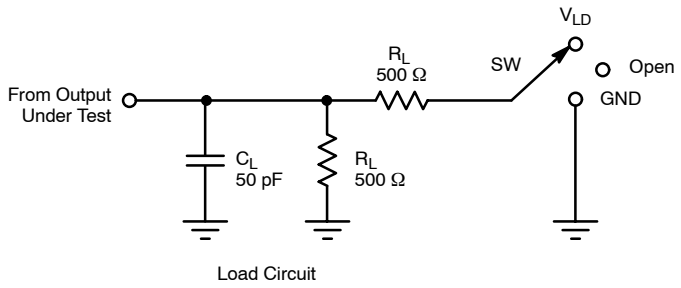
TYPICAL CHARACTERISTICS (25°C UNLESS NOTED)





AC LOADING AND WAVEFORMS



TEST	SW
t_{PLH}/t_{PHL}	Open
t_{PLZ}/t_{PZL}	V_{LD}
t_{PHZ}/t_{PZH}	GND

Figure 2. AC Test Circuit

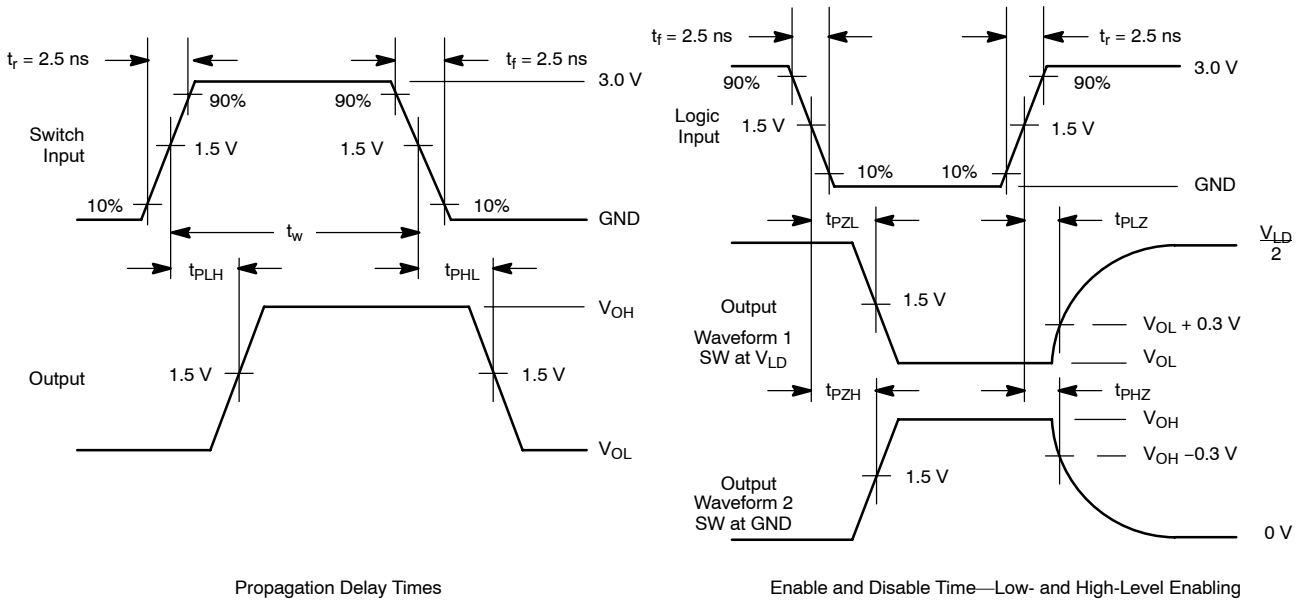


Figure 3. AC Waveforms

Notes:

a. C_L includes probe and jig capacitance.
b. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control.
c. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
d. All input pulses are supplied by generators having the following characteristics: PRR ≤ 10 MHz, Z_O = 50 Ω.
e. The outputs are measured one at a time with one transition per measurement.
f. t_{PLZ} and t_{PHZ} are the same as t_{dis}.
g. t_{PZL} and t_{PZH} are the same as t_{dis}.
h. t_{PLH} and t_{PHL} are the same as t_{dis}.
i. V_{LD} = 2 *V+*.
