# HEXFET® TRANSISTORS IRFD9010 P-CHANNEL HEXDIP™ IRFD9012

1-WATT RATED POWER MOSFETs  
IN A 4-PIN, DUAL-IN-LINE PACKAGE

4-PIN DIP

### -50 Volt, 0.50 Ohm, 1-Watt HEXDIP

The HEXFET® technology is the key to International Rectifier's advanced line of power MOSFET transistors. The efficient geometry and unique processing of the HEXFET design achieve very low on-state resistance combined with high transconductance and extreme device ruggedness.

The P-Channel HEXFETs are designed for application which require the convenience of reverse polarity operation. They retain all of the features of the more common N-Channel HEXFETs such as voltage control, very fast switching, ease of paralleling, and excellent temperature stability.

P-Channels HEXFETs are intended for use in power stages where complementary symmetry with N-Channel devices offers circuit simplification. They are also very useful in drive stages because of the circuit versatility offered by the reverse polarity connection. Applications include motor control, audio amplifiers, switched mode converters, control circuits and pulse amplifiers.

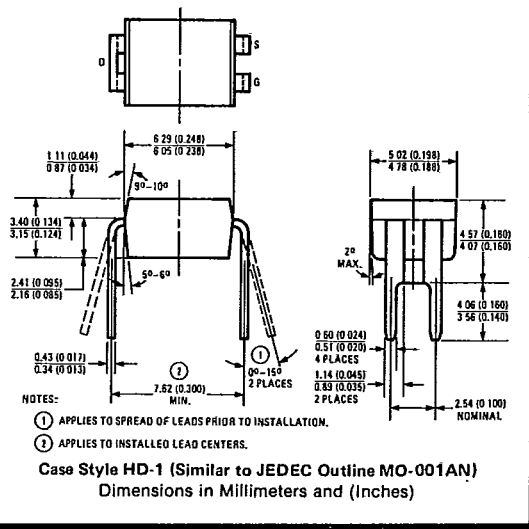

### Features

- For Automatic Insertion
- Compact, End Stackable
- Fast Switching
- Low Drive Current
- Easily Paralleled
- Excellent Temperature Stability
- P-Channel Versatility
